

Homework 9, ECE 590 & CS320

Please list (at least two) ways to deal with failures caused by Mandelbugs. And

1. Give a specific example of a non-aging-related Mandelbug where this action is likely to be successful and why.
2. Give a specific example of an aging-related-bug where this action is likely to be successful and why.

Note:

In the assignment, the most important part is the explanation of why the action works well for the example of Mandelbug. Therefore, you need to describe the example in as much detail as possible and give complete reasoning of why the action is likely to be successful. Use the content you have learnt in the class. You may also discuss the characteristics of the actions and why they apply to different situations.

If your explanation is not specific or convincing enough, you may lose some points.
